### DESCRIPTION

The M74HC139 is an high speed CMOS QUAD 2-INPUT NAND GATE fabricated with silicon gate C<sup>2</sup>MOS technology.  
 The active low enable input can be used for gating or as a data input for demultiplexing applications.

While the enable input is held high, all four outputs are high independently of the other inputs.  
 All inputs are equipped with protection circuits against static discharge and transient excess voltage.

Average operating current can be obtained by the following equation.  $I_{CC(opr)} = C_{PD} \times V_{CC} \times f_{IN} + I_{CC}/2$  (per circuit)

**TEST CIRCUIT**

C<sub>L</sub> = 50pF or equivalent (includes jig and probe capacitance)
