# STEREO AUDIO CODEC WITH USB INTERFACE, SINGLE-ENDED ANALOG INPUT/OUTPUT AND S/PDIF 

## FEATURES

- PCM2901: Without S/PDIF
- PCM2903: With S/PDIF
- On-Chip USB Interface
- With Full-Speed Transceivers
- Fully Compliant With USB 1.1 Specification
- Certified by USB-IF
- Partially Programmable Descriptors ${ }^{(1)}$
- USB Adaptive Mode for Playback
- USB Asynchronous Mode for Record
- Self-Powered
- 16-Bit Delta-Sigma ADC and DAC
- Sampling Rates
- DAC: 32, 44.1, 48 kHz
- ADC: 8, 11.025, 16, 22.05, 32, 44.1, 48 kHz
- On-Chip Clock Generator With Single 12-MHz Clock Source
- Single Power Supply: 3.3 V Typical
- Stereo ADC
- Analog Performance at $\mathrm{V}_{\mathrm{CCC}}=\mathrm{V}_{\mathrm{CCP} 1}=\mathrm{V}_{\mathrm{CCP} 2}$
$=\mathrm{V}_{\mathrm{CCx}}=\mathrm{V}_{\mathrm{DD}}=3.3 \mathrm{~V}$
- THD+N = 0.01\%
- SNR = 89 dB
- Dynamic Range $=89 \mathrm{~dB}$
- Decimation Digital Filter
- Pass-Band Ripple $= \pm 0.05 \mathrm{~dB}$
- Stop-Band Attenuation $=-65 \mathrm{~dB}$
- Single-Ended Voltage Input
- Antialiasing Filter Included
- Digital LCF Included
(1) The descriptor can be modified by changing a mask.
- Stereo DAC
- Analog Performance at $\mathrm{V}_{\mathrm{CCC}}=\mathrm{V}_{\mathrm{CCP} 1}=\mathrm{V}_{\mathrm{CCP} 2}$ $=\mathrm{V}_{\mathrm{CCx}}=\mathrm{V}_{\mathrm{DD}}=3.3 \mathrm{~V}$
- THD+N = 0.005\%
- SNR = 96 dB
- Dynamic Range = 93 dB
- Oversampling Digital Filter
- Pass-Band Ripple $= \pm 0.1 \mathrm{~dB}$
- Stop-Band Attenuation $=-43 \mathrm{~dB}$
- Single-Ended Voltage Output
- Analog LPF Included
- Multifunctions
- Human Interface Device (HID) Volume $\pm$ Control and Mute Control
- Suspend Flag
- Package: 28-Pin SSOP

## APPLICATIONS

- USB Audio Speaker
- USB Headset
- USB Monitor
- USB Audio Interface Box

## DESCRIPTION

The PCM2901/2903 is TI's single-chip USB stereo audio codec with USB-compliant full-speed protocol controller and S/PDIF (only PCM2903). The USB protocol controller works with no software code, but the USB descriptors can be modified in some areas (for example, vendor ID/product ID). The PCM2901/2903 employs SpAct ${ }^{\text {M }}$ architecture, TI's unique system that recovers the audio clock from USB packet data. On-chip analog PLLs with SpAct enable playback and record with low clock jitter and with independent playback and record sampling rates.

[^0] PCM2903

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION

| PCM2901 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PRODUCT | PACKAGE-LEAD | PACKAGE <br> DESIGNATOR | SPECIFIED <br> TEMPERATURE <br> RANGE | PACKAGE <br> MARKING | ORDERING <br> NUMBER | TRANSPORT <br> MEDIA |
| PCM2901E | SSOP-28 | $28 D B$ | $-25^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ | PCM2901E | PCM2901E | Rails |
|  | PCM2903E/2K | Tape and reel |  |  |  |  |

(1) Models with a slash (/) are available only in tape and reel in the quantities indicated (e.g., /2K indicates 2000 devices per reel). Ordering 2000 pieces of PCM2901E/2K gets a single 2000-piece tape and reel.

| PCM2903 |  |  |  |  |  |  |  |

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted) (1)

|  |  | PCM2901/PCM2903 | UNIT |
| :---: | :---: | :---: | :---: |
| Supply voltage, $\mathrm{V}_{\mathrm{CCC}}, \mathrm{V}_{\mathrm{CCP} 1}, \mathrm{~V}_{\mathrm{CCP} 2}, \mathrm{~V}_{\mathrm{CCX}}, \mathrm{V}_{\mathrm{DD}}$ |  | -0.3 to 4 | V |
| Supply voltage differences, $\mathrm{V}_{C C C}, \mathrm{~V}_{C C P}$, $\mathrm{V}_{C C P 2}, \mathrm{~V}_{C C X}, \mathrm{~V}_{\mathrm{DD}}$ |  | $\pm 0.1$ | V |
| Ground voltage differences, AGNDC, AGNDP, AGNDX, DGND, DGNDU |  | $\pm 0.1$ | V |
| Digital input voltage | SEL0, SEL1, TESTO (DIN) ${ }^{(2)}$ | -0.3 to 6.5 | V |
|  | D+, D-, HID0, HID1, HID2, XTI, XTO, TEST1 (DOUT) ${ }^{(2)}$, SSPND | -0.3 to $\left(\mathrm{V}_{\mathrm{DD}}+0.3\right)<4$ | V |
| Analog input voltage $\mathrm{V}_{\text {IN }} \mathrm{L}, \mathrm{V}_{\text {IN }} \mathrm{R}, \mathrm{V}_{\text {COM }}, \mathrm{V}_{\text {OUT }} \mathrm{R}, \mathrm{V}_{\text {OUT }} \mathrm{L}$ |  | -0.3 to ( $\left.\mathrm{V}_{\mathrm{CCC}}+0.3\right)<4$ | V |
| Input current (any pins except supplies) |  | $\pm 10$ | mA |
| Ambient temperature under bias |  | -40 to 125 | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature, $\mathrm{T}_{\text {stg }}$ |  | -55 to 150 | ${ }^{\circ} \mathrm{C}$ |
| Junction temperature $\mathrm{T}_{J}$ |  | 150 | ${ }^{\circ} \mathrm{C}$ |
| Lead temperature (soldering) |  | 260 | ${ }^{\circ} \mathrm{C}, 5 \mathrm{~s}$ |
| Package temperature (IR reflow, peak) |  | 250 | ${ }^{\circ} \mathrm{C}$ |

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) ( ): PCM2903

## DETAILED DESCRIPTION

## USB INTERFACE

Control data and audio data are transferred to the PCM2901/2903 via D+ (pin 1) and D- (pin 2). All data to/from the PCM2901/2903 is transferred at full speed. The device descriprtor contains the information described in Table 1. The device descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 1. Device Descriptor

| USB revision | 1.1 compliant |
| :--- | :--- |
| Device class | $0 \times 00$ (device-defined interface level) |
| Device subclass | $0 \times 00$ (not specified) |
| Device protocol | $0 \times 00$ (not specified) |
| Max packet size for end-point 0 | 8 bytes |
| Vendor ID | $0 \times 08 \mathrm{BB}$ (default value, can be modified) |
| Product ID | $0 \times 2901$ / 0x2903 (default value, can be modified) |
| Device release number | $1.0(0 \times 0100)$ |
| Number of configurations | 1 |
| Vendor strings | String \#1 (see Table 3) |
| Product strings | String \#2 (see Table 3) |
| Serial number | Not supported |

The configuration descriptor contains the information described in Table 2. The configuration descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 2. Configuration Descriptor

| Interface | Four interfaces |
| :--- | :--- |
| Power attribute | $0 \times C 0$ (Self-powered, no remote wakeup) |
| Maximum power | $0 \times 00(0 \mathrm{~mA}$. Default value, can be modified) |

The string descriptor contains the information described in Table 3. The string descriptor can be modified on request; contact a Texas Instruments representative for details.

Table 3. String Descriptor

| $\# 0$ | $0 \times 0409$ |
| :--- | :--- |
| $\# 1$ | Burr-Brown from TI (default value, can be modified) |
| $\# 2$ | USB audio codec (default value, can be modified) |

## DEVICE CONFIGURATON

Figure 34 illustrates the USB audio function topology. The PCM2901/2903 has four interfaces. Each interface is constructed by alternative settings.

Figure 34. USB Audio Function Topology

## Interface \#0

Interface \#0 is defined as the control interface. Alternative setting \#0 is the only possible setting for interface \#0. Alternative setting \#0 describes the standard audio control interface. A terminal constructs the audio control interface. The PCM2901/2903 has the following five terminals.

- Input terminal (IT \#1) for isochronous-out stream
- Output terminal (OT \#2) for audio analog output
- Feature unit (FU \#3) for DAC digital attenuator
- Input terminal (IT \#4) for audio analog input
- Output terminal (OT \#5) for isochronous-in stream

Input terminal \#1 is defined as USB stream (terminal type 0x0101). Input terminal \#1 can accept 2-channel audio streams constructed by left and right channels. Output terminal \#2 is defined as a speaker (terminal type $0 \times 0301$ ). Input terminal $\# 4$ is defined as microphone (terminal type $0 \times 0201$ ). Output terminal $\# 5$ is defined as a USB stream (terminal type 0x0101). Output terminal \#5 can generate 2 -channel audio streams constructed by left and right channels. Feature unit \#3 supports the following sound control features.

- Volume control
- Mute control

The built-in digital volume controller can be manipulated by an audio class specific request from 0 dB to -64 dB in $1-\mathrm{dB}$ steps. Changes are made by incrementing or decrementing by one step ( 1 dB ) for every $1 / \mathrm{f}_{\mathrm{s}}$ time interval until the volume level has reached the requested value. Each channel can be set for different values. The master volume control is not supported. A request to the master volume is stalled and ignored. The built-in digital mute controller can be manipulated by audio class-specific request. A master mute control request is acceptable. A request to an individual channel is stalled and ignored.

## Interface \#1

Interface \#1 is defined as the audio streaming data-out interface. Interface \#1 has the following seven alternative settings. Alternative setting \#0 is the zero-bandwidth setting.

| ALTERNATIVE <br> SETTING | DATA FORMAT |  |  |  | TRANSFER <br> MODE |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 00 | SAMPLING RATE <br> $\mathbf{( k H z )}$ |  |  |  |  |
| 01 | 16 bit | Stereo bandwidth | 2s complement (PCM) | Adaptive | $32,44.1,48$ |
| 02 | 16 bit | Mono | 2s complement (PCM) | Adaptive | $32,44.1,48$ |
| 03 | 8 bit | Stereo | 2s complement (PCM) | Adaptive | $32,44.1,48$ |
| 04 | 8 bit | Mono | 2s complement (PCM) | Adaptive | $32,44.1,48$ |
| 05 | 8 bit | Stereo | Offset binary (PCM8) | Adaptive | $32,44.1,48$ |
| 06 | 8 bit | Mono | Offset binary (PCM8) | Adaptive | $32,44.1,48$ |

## Interface \#2

Interface \#2 is defined as the audio streaming data-in interface. Interface \#2 has the following 19 alternative settings. Alternative setting \#0 is the zero-bandwidth setting. All other alternative settings are operational settings.

| $\begin{array}{c}\text { ALTERNATIVE } \\ \text { SETTING }\end{array}$ | DATA FORMAT |  |  |  | TRANSFER MODE |
| :---: | :---: | :---: | :---: | :---: | :---: | \(\left.\begin{array}{c}SAMPLING RATE <br>

(kHz)\end{array}\right]\)

## Interface \#3

Interface \#3 is defined as the interrupt data-in interface. Alternative setting \#0 is the only possible setting for interface \#3. Interface \#3 constructs the HID consumer control device. Interface \#3 reports the following three key statuses.

- Mute (0xE209)
- Volume up (0xE909)
- Volume down (0xEA09)

## End-Points

The PCM2901/2903 has the following four end-points.

- Control end-point (EP \#0)
- Isochronous-out audio data stream end-point (EP \#2)
- Isochronous-in audio data stream end-point (EP \#4)
- HID end-point (EP \#5)

The control end-point is a default end-point. The control end-point is used to control all functions of the PCM2901/2903 by the standard USB request and USB audio-class-specific request from the host. The isochronous-out audio data stream end-point is an audio sink end-point, which receives the PCM audio data. The isochronous-out audio data stream end-point accepts the adaptive transfer mode. The isochronous-in audio data stream end-point is an audio source end-point, which transmits the PCM audio data. The isochronous-in audio data stream end-point uses asynchronous transfer mode. The HID end-point is an interrupt-in end-point. HID end-point reports HID0, HID1, and HID2 pin status every 32 ms .
The human interface device (HID) pins are defined as consumer control devices. The HID function is designed as an independent end-point from both isochronous-in and -out end-points. This means that the device affected by the HID operation depends on the host software. Typically, the HID function affects the primary audio-out device.

## Clock and Reset

The PCM2901/2903 requires a $12-\mathrm{MHz}$ ( $\pm 500 \mathrm{ppm}$ ) clock for the USB and audio function, which can be generated by a built-in crystal oscillator with a $12-\mathrm{MHz}$ crystal resonator or supplied by an external clock. The $12-\mathrm{MHz}$ crystal resonator must be connected to XTI (pin 21) and XTO (pin 20) with one high (1-Mת) resistor and two small capacitors, the capacitance of which depends on the load capacitance of the crystal resonator. If the external clock is used, the clock must be supplied to XTI, and XTO must be open.
The PCM2901/2903 has an internal power-on reset circuit, which works automatically when $V_{D D}$ (pin 27) exceeds 2.5 V typical ( 2.7 V to 2.2 V ), and about $700 \mu \mathrm{~s}$ is required until internal reset release.)

## Digital Audio Interface (PCM2903)

The PCM2903 employs both S/PDIF input and output. Isochronous-out data from the host is encoded to the S/PDIF output and the DAC analog output. Input data is selected as either S/PDIF or ADC analog input. When the device detects an S/PDIF input and successfully locks on the received data, the isochronous-in transfer data source is automatically selected from S/PDIF itself; otherwise, the data source is selected to ADC analog input.

## Supported Input Data (PCM2903)

The following data formats are accepted by the S/PDIF input and output. All other data formats are unable to use S/PDIF.

- $48-\mathrm{kHz}$ 16-bit stereo
- $44.1-\mathrm{kHz} 16$-bit stereo
- 32-kHz 16-bit stereo

Mismatch between input data format and host command may cause unexpected results except in the following conditions.

- Record monaural format from stereo data input at the same data rate
- Record 8-bit format from 16 -bit data input at the same data rate

A combination of the foregoing conditions is not accepted.
For playback, all possible data-rate source is converted to 16 -bit stereo format at the same source data rate.

## Channel Status Information (PCM2903)

The channel status information is fixed as consumer application, PCM mode, copyright, and digital/digital converter. All other bits are fixed as 0s except for the sample frequency, which is set automatically according to the data received through the USB.

## Copyright Management (PCM2903)

Isochronous-in data is affected by the serial copy management system (SCMS). Where receiving digital audio data that is indicated as original data in the control bit, input digital audio data transfers to the host. If the data is indicated as first generation or higher, transferred data is selected to analog input.
Digital audio data output is always encoded as original with SCMS control.
The implementation of this feature is an option for the customer. Note that it is the user's responsibility whether they implement this feature in their product or not.

## INTERFACE SEQUENCE

## Power On, Attach, and Playback Sequence

The PCM2901/2903 is ready for setup when the reset sequence has finished and the USB bus is attached. In order to perform certain reset sequences defined in the USB specification, $\mathrm{V}_{\mathrm{DD}}, \mathrm{V}_{\mathrm{CCC}}, \mathrm{V}_{\mathrm{CCP} 1}, \mathrm{~V}_{\mathrm{CCP} 2}$, and $\mathrm{V}_{\mathrm{CCX}}$ must rise up with $10 \mathrm{~ms} / 3.3 \mathrm{~V}$. After connection has been established by setup, the PCM2901/2903 is ready to accept USB audio data. While waiting, the audio data (idle state) and analog output are set to bipolar zero (BPZ).
When receiving the audio data, the PCM2901/2903 stores the first audio packet, which contained 1-ms audio data, into the internal storage buffer. The PCM2901/2903 starts playing the audio data when detecting the following start of frame (SOF) packet.

PCM2901

Figure 35. Attach After Power On

Figure 36. Power-On Under Attach

## Play, Stop, and Detach Sequence

When the host finishes or aborts the playback, the PCM2901/2903 stops playing after the last audio data has played.

## Record Sequence

The PCM2901/2903 starts the audio capture into the internal memory after receiving the SET_INTERFACE command.

## Suspend and Resume Sequence

The PCM2901/2903 enters the suspend state after it detects a constant idle state on the USB bus, approximately 5 ms . While the PCM2901/2903 enters the suspend state, the SSPND flag (pin 28) is asserted. The PCM2901/2903 wakes up immediately after detecting a non-idle state on the USB bus.

## PCM2901 TYPICAL CIRCUIT CONNECTION

Figure 40 illustrates a typical circuit connection for a simple application. The circuit illustrated is for information only. The whole board design should be considered to meet the USB specification as a USB-compliant product.

NOTE:
IC1 must be driven by $\mathrm{V}_{\mathrm{DD}}$ with a $5-\mathrm{V}$ tolerant input.
$\mathrm{C}_{1}, \mathrm{C}_{2}, \mathrm{C}_{3}, \mathrm{C}_{4}, \mathrm{C}_{7}, \mathrm{C}_{8}: 10 \mu \mathrm{~F}$
$\mathrm{C}_{5}, \mathrm{C}_{6}: 10 \mathrm{pF}$ to 33 pF (depending on crystal resonator)
$\mathrm{C}_{9}, \mathrm{C}_{10}, \mathrm{C}_{11}, \mathrm{C}_{12}$ : The capacitance may vary depending on design.
Figure 40. Self-Powered Configuration

## PCM2903 TYPICAL CIRCUIT CONNECTION

Figure 41 illustrates a typical circuit connection for a simple application. The circuit illustrated is for information only. The whole board design should be considered to meet the USB specification as a USB-compliant product.

NOTE:
IC1 must be driven by $\mathrm{V}_{\mathrm{DD}}$ with a $5-\mathrm{V}$ tolerant input.
$\mathrm{C}_{1}, \mathrm{C}_{2}, \mathrm{C}_{3}, \mathrm{C}_{4}, \mathrm{C}_{7}, \mathrm{C}_{8}: 10 \mu \mathrm{~F}$
$\mathrm{C}_{5}, \mathrm{C}_{6}: 10 \mathrm{pF}$ to 33 pF (depending on crystal resonator)
$\mathrm{C}_{9}, \mathrm{C}_{10}, \mathrm{C}_{11}, \mathrm{C}_{12}$ : The capacitance may vary depending on design.
Figure 41. Self-Powered Configuration

## APPENDIX

## Operating Environment

For current information on the PCM2901/2903 operating environment, see the Updated Operating Environments for PCM270X, PCM290X Applications application report, SLAA374.

## REVISION HISTORY

Changes from Revision B (March 2002) to Revision C Page

- Deleted operating environment information from data sheet and added reference to application report ............................ 30

## PACKAGING INFORMATION

| Orderable Device | Status <br> (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan <br> (2) | Lead/Ball Finish <br> (6) | MSL Peak Temp <br> (3) | Op Temp ( ${ }^{\circ} \mathrm{C}$ ) | Device Marking <br> (4/5) | Samples |

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb -Free products are suitable for use in specified lead-free processes. Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS \& no $\mathbf{S b} / \mathrm{Br}$ ): Tl defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine ( Br ) and Antimony ( Sb ) based flame retardants ( Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a " $\sim$ " will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents Tl's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by Tl to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in Tl's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.
TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.
TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.
Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.
In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, Tl's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.
No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.
Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.
TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

## Products

Audio
Amplifiers
Data Converters
DLP® Products
DSP
Clocks and Timers
Interface
Logic
Power Mgmt
Microcontrollers
RFID
OMAP Applications Processors
Wireless Connectivity

## Applications

Automotive and Transportation
Communications and Telecom
Computers and Peripherals
Consumer Electronics
Energy and Lighting
Industrial
Medical
Security
Space, Avionics and Defense
Video and Imaging
